**The Hon'ble Prime Minister of India**  
**Shri Narendra Modi Ji.**

**CHILD PORNOGRAPHY SIMULATION:**

**Paper on the portrayal of young boys and girls as children in pornography that insinuates child pornography to perpetrators of child sexual fantasy and abuse.**

Respected Sir,

With great admiration to your courage and commitment to the progress of the nation of India, I hereby contribute to your fight against child pornography.

Just as any movie would have a script writer, a director and actors; it is the same with the pornographic industry. As there are genres in the media industry; the same exists in the adult entertainment industry too. One such type of audience and consumers are those with sexual fetishism to view child pornography. However, while our government prohibits and bans child pornography, the pornographic industry is currently beating the Indian system— simply by portraying young boys and girls as little children – consequently insinuating child pornography.

I have coined this term as CPS or child pornography simulation.

Consumers of such material, while watching the alluring affect of these young actors, believe in their minds that these actors are actual children; as the brain has a way of tricking the adult consumer into believing that s/he is intrinsically involved in the sexual act with a child and not just a mere spectator. This is why advertising is so successful, as it inspires emotions into people, creating a desire and craving for the product and service advertised.

The very fact that an adult is viewing child sex and or child insinuating sex is the premise that s/he has already been thinking about sex as a **verb** with children and pornography causes the viewer to think that s/he is in reality - having sex with children. Therefore if an adult is watching pornography where the actors are young girls and boys dressed in school uniforms or clothes characterizing children and directed to simulate the representation of children, the brain of the adult viewing CPS becomes wired to a passion to desire children, sexually. This will automatically lead to child sexual abuse (CSA).

Most rapists that have been interviewed confessed to be frequent consumers of pornography. Inasmuch the same way, many CSA predators have become habituated to watching simulations of child pornography and thus desire children as sexual partners.

Some of the CPS videos are scripted and directed in very aggressive measures and deals on the violent and subservient levels of sexuality. This would answer the question as to why adults, who sexually assault children, brutalise them.

The plausible argument is that exposure to child simulation pornography promotes criminal sexual intent that otherwise would not exist in adult offenders. The exposure may take place via material that legitimizes CPS in the minds of the consumer, and s/he may be convinced that minors also have sexual interests.

CPS consumers motivated and excited by still or moving images with sexual content, makes actual criminal sexual behaviour with children more probable if the person was already sexually motivated towards children, or, by creating new sexual interests in children.

CPS has definitely led to the increase in child sexual abuse as consumers of such pornography have hard wired their brain to be attracted to children, sexually.

**It is my appeal to ban pornographic websites that insinuates child pornography.**

## Appendix of the various forms of CPSs as Role Playing in pornography:

**Sexual masochists** have a desire to be treated as a helpless infant and clothed in diapers ('infantilism') and this association is repeated by others. Masochism appears to be particularly important for female infantilists.

**Paraphilic infantilism**, also known as autonepiophilia and adult baby syndrome can be a sexual fetish for some that involves role-playing a regression to an infant-like state. Behaviours may include drinking from a bottle or wearing diapers. Individuals may engage in gentle and nurturing experiences (an adult who only engages in infantilistic play is known as an adult baby) or be attracted to masochism.

**Masochism**, The Diagnostic and Statistical Manual of Mental Disorders (DSM) states that along with other behaviours, sexual masochists may have a desire to be treated as a helpless infant and clothed in diapers. This is portrayed in CPS imagery.

**Sadomasochism**, is the giving or receiving of pleasure from acts involving the receipt or infliction of pain or humiliation. Adults who are inclined to CPS types of sadomasochism may seek sexual gratification from their acts against children. While the terms sadist and masochist refer respectively to one who enjoys giving or receiving pain, CPS perpetrators of sadomasochism may even force the victim to switch between activity and passivity/ obedience. In Bangalore recently, a child said that "watchman uncle" sexually abused her. In the child's mind, she was being obedient to the "watchman uncle" while her innocence and sexual integrity was being violated.

Truly Yours,

Dr. Dominic F Dixon
